```
The invention relates to isolated nucleic acid molecules and their concoded secreted proteins. The nucleic acids and proteins are used to grevent, treat or ameliorate a medical condition in e.g. humans, mice, crabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in calleviating symptoms associated with the disorders and in diagnostic diseases e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune considers e.g. rheumatoid arthritis, hyperproliferative disorders e.g. carrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to reguencate tissues and in chemotaxis. The polypeptides can also be used to and sound healing and epithelial cell proliferation, for supporting cell culture of primary tissues, to reguencate tissues and in chemotaxis. The polypeptides can also be used capabilities, fat content, lipid, protein, carbohydrate, vitamins, and equence encodes a novel secreted protein of the invention. Note: The sequence data for this patent did not form part of the printed

The polypeptides and polypucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendicitis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial infarction) and cancerous diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC (ELISA). Disorders which are diagnosed or treated include autoimmune cd diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cd diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cc neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac carrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, cc nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, can dnany other disorders listed in the specification. The polypeptides cc and many other disorders listed in the specification. The polypeptides cc analso be used to aid wound healing and epithelial cell proliferation, cr supporting cell culture of primary tissues, to cregenerate tissues and in chemotaxis. The polypeptides can also be used additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, coffactors and other nutritional components. The present componence encodes a novel secreted protein carbohydrate, votamins. The present content data for this patent did not form part of the printed content.

The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic

New polypeptides and nucleic acids, useful in gene therapy for treating, inhibiting or preventing e.g. neural, immune system, muscular, respiratory, reproductive, gastrointestinal, pulmonary, cardiovascular or renal disorders. S,

English.

The invention relates to human novel polypeptides and their associated CC polynucleotides. The polypeptides and polynucleotides are useful in gene CC therapy for treating, inhibiting or preventing neural disorders, immune CC and multiple sclerosis), muscular disorders, respiratory diseases (e.g. cand multiple sclerosis), muscular disorders, respiratory diseases (e.g. cand multiple sclerosis), muscular disorders, respiratory diseases (e.g. cand multiple sclerosis), muscular disorders, respiratory diseases (e.g. congenital disorders, pulmonary disorders, cardiovascular disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end-stage crenal disease), hyperproliferative disorders (e.g. Hodykin's disease and cleukaemia), inflammatory diseases (e.g. septic shock, bursitis and capendicitis), allergic reactions and conditions (e.g. asthma), blood crelated disorders (e.g. thrombosis, atherosclerosis and myocardial cc infarction) and cancerous diseases. Sequences ABX73173-ABX74167 represent creations conditions cand condition conditions and conditions con

CC genes. (1) is useful in gene therapy techniques to restore normal CC activity of (II) or to treat disease states involving (II). (II) is CC useful for generating antibodies against it, detecting or quantitating a CC useful for generating and its against it, detecting or quantitating a CC polypeptide in tissue, as molecular weight markers and as a food CC supplement. (II) and its binding partners are useful in medical imaging CC stype the styressing (II). (I) and (II) are useful for treating disorders involving abservant protein expression or biological activity. The CC polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC coding sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this constant did not appear in the printed specification, but was obtained in CC ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                        Query Match

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also use in diagnostics as expressed sequence tags for identifying expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutatio diagnosible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosophanit assays pricated in the condition of the protein can be used in the condition of the protein and the protein can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosophanit assays importance which was a diagnostic pricated in the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the protein and the prot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-NOV-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit development of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      02-APR-1999;

Mcneill
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human lung tumour L523S cDNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABL49254 standard; cDNA; 1740
                                                                                                                                                                                                                                                                                The present invention describes human lung tumour proteins. Human lung tumour proteins and polynuclectides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynuclectides, antibodies, fusion proteins, Teell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABI48959 to ABI49300 and ABB74946 to ABB75770 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-MAY-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABL49254;

Novel lung carcinoma polynucleotide sequences and polypeptides encoded the polynucleotides, useful in pharmaceutical compositions such as vaccines and as markers to indicate the presence of lung cancer. γď

Claim 1; Page 337; 381pp; English.

comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polynucleotide that hybridises to the oligonucleotide and comparing the amount of polynucleotide that hybridises to the oligonucleotide to a predetermined cut-off value, and determining the presence of a cancer in the patient. (I) and (II) are useful in pharmaceutical compositions, e.g. vaccines. (I) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. ABQ92145 to ABB92486 and ABP61866 to ABP61992 represent sequences used in the exemplification of the present invention. The present invention describes isolated human lung carcinoma polypucleotides (I) and polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. ; Sequence 6, Application US/09899651

; Patent No. 6576756

; GENERAL INFORMATION:

APPLICANT: Chen, Yao-Tseng

; APPLICANT: Tsang, Solam

APPLICANT: Stockert, Elisabeth

; APPLICANT: Jager, Elke

; APPLICANT: Old, Lloyd J.

; TITLE OF INVENTION: Isolated Nucleic Acid Molecules Encoding Cancer

TITLE OF INVENTION: Associated

; TITLE OF INVENTION: Annigen, The Antigens Per Se, And Uses Thereof

; TITLE REFERENCE: LUD 5538

; CURRENT APPLICATION NUMBER: US/09/899,651

; CURRENT FILING DATE: 2001-07-06

; PRIOR APPLICATION NUMBER: US/09/061,709
